### GENERATE THREE ADDRESS CODES

### AIM:

To generate three address code using C program.

### **ALGORITHM:**

- Get address code sequence.
- Determine current location of 3 using address (for 1st operand).
- If the current location does not already exist, generate move (B, O).
- Update address of A (for 2nd operand).
- If the current value of B and () is null, exist.
- If they generate operator () A, 3 ADPR.
- Store the move instruction in memory.

# **PROGRAM**:

```
#include<stdio.h>
#include<string.h>
#include<stdlib.h>
void pm();
void plus();
void divi();

       return str;

$ ./a.out
1.assignment
2.arithmetic
3.relational
4.Exit
Enter the choice:1
Enter the expression with assignment operator:a=b+c
Three address code:
temp=b+c
a=temp
1.assignment
2.arithmetic
3.relational
4.Exit
Enter the choice:4
```

## **RESULT:**

Thus, three address code is generated using C program.
